WONGKUNA

Abstract

Nine species of mosses collected from Doi Suthep-Pui National Park are reported new to Thailand. Of these, *Rhachithecium* is a new generic record for the moss flora of Thailand. Notes on the ecology, morphology, taxonomy, and distribution of new records are included. *Fissidens flaccidus* Mitt. var. *percurrens* Wongkuna is described as a new variety from Thailand.

**Brachytheciaceae / Bryaceae / Hypnaceae / Myuriaceae /
Plagiotheciaceae / Rhachytheciaceae / Sematophyllaceae / Thai
moss flora**

Charts Data

SJR indicator vs. Cites per Doc (2y)

The SJR indicator measures the scientific influence of the average article in a journal, it expresses how central to the global scientific discussion an average article of the journal is. Cites per Doc. (2y) measures the scientific impact of an average article published in the journal, it is computed using the same formula that journal impact factorTM (Thomson Reuters).

Citation vs. Self-Citation
