

EXISTENCE THEOREMS FOR SOME SYSTEMS OF QUASI-VARIATIONAL INEQUALITIES PROBLEMS ON UNIFORMLY PROX-REGULAR SETS

NARIN PETROT AND JITTIPORN SUWANNAWIT ✓

Abstract. In this paper, some systems of quasi-variational inequality problems are considered on a class of nonconvex sets, as uniformly prox-regular sets. Some sufficient conditions for the existence solution of the considered problems are provided. Also, some interesting remarks are discussed. The results which are presented in this paper are more general, and may be viewed as an extension, improvement and refinement of the previously known results in the litterateurs.

Mathematics subject classification (2010): 47H05, 49J40, 49J52.

Keywords and phrases: System of quasi-variational inequalities problems, uniformly prox-regular set, proximal normal cone, strongly monotone mapping, Lipschitzain continuous mapping, Hausdorff Lipschitz continuous.

The SJR indicator measures the scientific influence of the average article in a journal, it expresses how central to the global scientific discussion an average article of the journal is. Cites per Doc. (2y) measures the scientific impact of an average article published in the journal, it is computed using the same formula that journal impact factor™ (Thomson Reuters).
